

Carnival Admission Program

Objective

Write a Python program that calculates and displays the admission price for a carnival based on a visitor's information.

This assignment will help you practice **if/elif/else conditionals**, logical operators (**and**, **or**), and combining multiple rules.

Admission Rules

Your program should apply the following rules in order:

- 🧒 **Kids under 6** → Free admission
- 🎓 **Students**
 - Weekdays → Free admission
 - Weekends → \$2 off
- 🧓 **Seniors (65+)** → \$3 off every day
- 💵 **Regular Admission Prices**
 - Weekdays → \$12
 - Weekends → \$17

💡 All discounts are applied to the base ticket price.

Program Requirements

1. Ask the user for:
 - Their age
 - Whether they are a student (**yes/no**)
 - What day of the week it is
 2. Apply the correct rules to determine the ticket cost.
 3. Print a clear message showing:
 - The user's age, student/senior status
 - The base ticket price
 - Any discount applied
 - The **final amount owed**
-

Example Runs

Example 1

```
Enter your age: 4
Are you a student? (yes/no): no
What day of the week is it (mon, tues, wed, thurs, fri, sat, sun)? mon

👶 Kids under 6 get in FREE!
Final Price: $0
```

Example 2

```
Enter your age: 20
Are you a student? (yes/no): yes
What day of the week is it (mon, tues, wed, thurs, fri, sat, sun)? sun

Base price: $17
Student weekend discount: -$2
Final Price: $15
```
